

# Invisible Vent INV100 Nature

## Application

The INV100 Nature vent from J.A. Plast is the ultimate low profile solution for sanitary ventilation from kitchen, bathroom and laundry room or as stack pipe. Concealed under the original roofing material it is almost invisible.

*Please refer to national standards.*

- For pitched roofs min. 30°
- 9,000 mm<sup>2</sup> ventilation area
- For natural and manmade slate

## Design

The INV100 Nature vent is specially designed to be efficient, but at the same time inconspicuous. The vent is concealed underneath the roofing material, as slate material is fixed around the grille with strips of butyl. The grille keeps out insects and drifting snow, and a built in water stop diverts rainwater safely back onto the roof surface. The vent comes with an adapter for optional connection to Tubivent. Easily installed and hardly noticeable on the roof, the vent is the obvious choice for natural and manmade slate.

## Colour and Surface

INV100 Nature vent is manufactured with two grille colours slate grey or grey/green.

## Materials

Vent and adapter are manufactured from HIPS (High Impact Polystyrene).

The Tubivent is manufactured from PP (PolyPropylene).

## Handling

Keep in original packaging during transport.

Do not wrap and expose to heavy load during transport.

Remove plastic bag before placing in sunlight.

## Accessories

*Roofing accessories supplied from J.A. Plast match roof profile, colour and surface 100%. The current product list and further information can be found on our homepage, [www.japlast.com](http://www.japlast.com).*
