

Technical Information

LAWN & GARDEN TOPSOIL

Description

Evergreen Topsoil is a fertile loam based soil with a high content of organic matter, specially selected for use in the garden. It is ideal for making or building up raised beds where existing soil is poor or for replacing soil that is tired and unsuitable for replanting. Our topsoil is rich in organic matter, adds volume to beds and conditions soil.

Composition

Our Top Soil is a rich blend of sandy clay loam and organic matter that retains moisture to give plants the best start. It is also screened and graded for a neat, weed-free, fine texture. The product is fertile, organic and versatile with a fully traceable content.

Formats

Available in 25L & 35L bags . Bulk bags and loose formats.

Physical & Chemical Properties

- Screened to 12mm
- Recycled green waste compost produced to BSI PAS100:2018
- Contains soil conditioner
- Typically classed as medium loam
- Weight to volume bulk ratio (bulk density) is typically 900-1100kg/m³
- pH typically 6-7.5
- Minimal stone content
- Typically organic content 9.5%
- Analysed at BS3882:2015
- Sustainable

Hazard Identification

Dust is the main hazard if the product should become dry.
Large bags should be lifted with care.

Handling & Storage

Store in a cool, dry place out of direct sunlight and handle with care as the product is dense.

All values given in the Technical Specification are typical. However, some variation may occur from time to time. Evergreen Horticulture reserves the right to alter the specification without notice, for the purpose of product improvement. Product tested in accordance with methods listed in the relevant British Standards for Soil Improvers and Growing Media.
