

Glidevale Overfascia Vent

Product Code: GVFV100 / GVFV250

- 10mm x 1m
- 25mm x 1m

FV Fascia Ventilators are an unobtrusive method of providing ventilation in a range of eaves details, including those without a projecting soffit. They must always be used with RV Rafter Ventilators, to provide a continuous ventilation path from the roof void to the outside without impairing the weatherproof function of the structure, as required by BS 5250.

They can also be used in situations where detailing is difficult and tile or slate ventilators are inappropriate, e.g. parapet walls, secret gutters, corbelled eaves and monopitch ridges. FV250 Ventilator can also be used for flat roofs.

FV100 Over Fascia Ventilator installed continuously provides ventilation opening of 10,000mm²/m

FV250 Over Fascia Ventilator installed continuously provides ventilation opening of 25,000mm²/m

Features & benefits

Quick & Easy to install

Lightweight & Durable

Compatible with all roof tile clips & eaves fillers (Overfascia Vent)

Does not affect slating / tiling process

Gutter bracket spacers available to ensure correct gutter position unrestricted airflow
